

a few notes about your new toy...

Dear cycling friend,

Your bike has been assembled and packaged by one of our technicians in our workshop in Quebec. If you are not comfortable or experienced enough to complete the assembly, we strongly suggest that you visit a Panorama Cycles retailer or your local bike shop for expert assistance.

Some important notes:

- The tightening torques to be observed are as follows:

- Seatpost collar: 5 Nm
- Stem (on fork): 5 Nm
- Brake caliper: 6 Nm
- Sliding dropouts: 6 Nm
- Thru axles: 10 Nm

The packaging of your bicycle comes from recycled materials, and is therefore also almost completely recyclable. One little step at a time, we all need to do our part.
